

# EPC

## **Objective:**

The purpose of this training is to enable participants to effectively and economically apply the early production containment procedure as required by GM 1927 28 Early Production Containment (EPC).

Early production containment allows you to:

Validate the supplier's production control plan.

Protect manufacturing and assembly centers and spare parts warehouses from quality non-conformances.

Document the supplier's efforts to verify process control during start-up, in-between, and post-manufacturing process review, or when manufacturing runs are separated by 3 months or more.

Ensure any quality issues that may arise are identified, contained, and corrected quickly at the supplier location.

Increase the involvement and visibility of the supplier's top management.

## **Target audience:**

Training.

Maintenance.

Materials.

Design, manufacturing, tools, and quality engineering.
